

Assignment 4 Writeup

Game Executable:

https://github.com/WayGold/EAE6320_Assignments/blob/Assignment04/MyGame_.zip

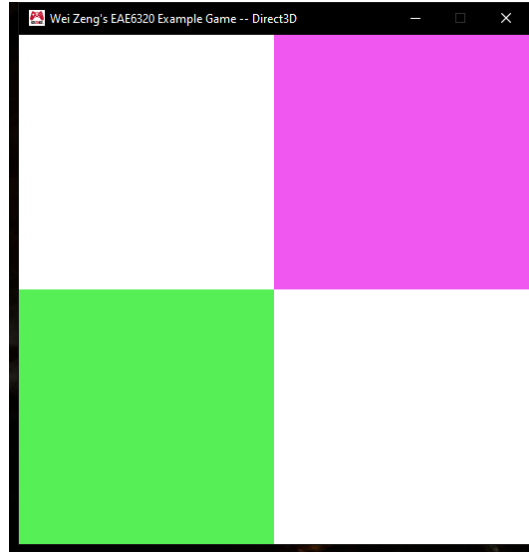

Game running:

(Default State)

(Missing One Mesh - Press Space)

(Different Effect - Press Tab)

```
154     std::vector<float> clearColor = { 1.0f, 1.0f, 1.0f, 1.0f };
155
156     Graphics::SubmitClearColor(clearColor);
```

(Submitting Background Color)

In order to submit a mesh/effect pair to be drawn, you need to first create a mesh and an effect.

```
VertexFormats::sVertex_mesh vertexData[4];
{
    // OpenGL is right-handed
    vertexData[0].x = 0.0f;
    vertexData[0].y = 0.0f;
    vertexData[0].z = 0.0f;

    vertexData[1].x = 1.0f;
    vertexData[1].y = 1.0f;
    vertexData[1].z = 0.0f;

    vertexData[2].x = 0.0f;
    vertexData[2].y = 1.0f;
    vertexData[2].z = 0.0f;

    vertexData[3].x = 1.0f;
    vertexData[3].y = 0.0f;
    vertexData[3].z = 0.0f;
}

// Clockwise
uint16_t triData[6] = { 0, 1, 2, 0, 3, 1 };

Graphics::Mesh::Mesh::createMesh(mesh_1, vertexData, triData, 4, 6);
```

(Creating Mesh)

```
120 Effect::Effect::createEffect(effect_1, "data/Shaders/Vertex/standard.shader",
121 "data/Shaders/Fragment/anim_color.shader");
```

(Creating Effect)

Once you have created a mesh and a corresponding effect, you could call the following function to submit.

```
159 Graphics::SubmitMeshEffectData(meshArr[0], effectArr[0]);
```

(Submit with a mesh pointer and effect pointer)

The reason why we need to cache the data is due to the fact that we are running multithreading and we don't want unexpected behavior. If we don't cache the render thread could potentially start rendering when the data is not submitted for example.

The mesh class has a size of 40 bytes under x64, previously I had two vectors to store the vertex data and was using them mainly just for getting the size of the vertex array and index array.

Vector took a lot of memory space so I swap them into two unsigned int just to store the array sizes and drastically reduce the space.

|

(Log the size of mesh and effect)

```

36 |         class Mesh
37 |         {
38 |         public:
39 |             unsigned int m_vertexCount = 0;
40 |             unsigned int m_indexCount = 0;
41 |
42 | #ifdef EAE6320_PLATFORM_GL
43 |             // A vertex buffer holds the data for each vertex
44 |             GLuint m_vertexBufferId = 0;
45 |             GLuint m_indexBufferId = 0;
46 |             // A vertex array encapsulates the vertex data as well as the vertex input layout
47 |             GLuint m_vertexArrayId = 0;
48 | #endif
49 |
50 |
51 | #ifdef EAE6320_PLATFORM_D3D
52 |             eae6320::Graphics::cVertexFormat* m_vertexFormat = nullptr;
53 |
54 |             // A vertex buffer holds the data for each vertex
55 |             ID3D11Buffer* m_vertexBuffer = nullptr;
56 |             ID3D11Buffer* m_indexBuffer = nullptr;
57 | #endif
58 |
59 |             void Draw();
60 |             static cResult createMesh(Mesh*& i_ptr, VertexFormats::sVertex_mesh points[], uint16_t triangles[],
61 |                                     unsigned int i_vertexCount, unsigned int i_indexCount);
62 |
63 |             EAE6320_ASSETS_DECLAREREFERENCECOUNTINGFUNCTIONS()
64 |             EAE6320_ASSETS_DECLAREDELETEDREFERENCECOUNTEDFUNCTIONS(Mesh)
65 |             EAE6320_ASSETS_DECLAREREFERENCECOUNT()
66 |
67 |         private:
68 |             Mesh() {};
69 |             ~Mesh();
70 |
71 |             void init(VertexFormats::sVertex_mesh points[], uint16_t triangles[],
72 |                       unsigned int i_vertexCount, unsigned int i_indexCount);

```

(Mesh class members)

The effect class is pretty much the same as the previous assignment with size 56 bytes under x64.

Adding 8 more bytes with the reference count variable anywhere would not make any difference.

```

class Effect {
public:

EAE6320_PLATFORM_GL
    GLuint m_programId = 0;

    EAE6320_ASSETS_DECLAREREFERENCECOUNT()

    eae6320::Graphics::cShader* m_vertexShader = nullptr;
    eae6320::Graphics::cShader* m_fragmentShader = nullptr;
    eae6320::Graphics::cRenderState m_renderState;

    void Bind();
    static cResult createEffect(Effect*& o_ptr, string vertShader, string fragShader);

    EAE6320_ASSETS_DECLAREREFERENCECOUNTINGFUNCTIONS()
    EAE6320_ASSETS_DECLAREDELETEDREFERENCECOUNTEDFUNCTIONS(Effect)

private:
    Effect() {};
    ~Effect();

    void init(string vertShader, string fragShader);
};

```

(Effect class members)

The total memory I budget for the render data was 336 and then reduced to 328. Originally I used a vector to store background color so I swapped it into a float array of 4 elements. I used two arrays each to store the submitted pointers for meshes and effects and a gameObject counter to keep track of the relationships between meshes and effects.
